Abdul-Lateef Sakariyau

Full-Stack Software Engineer
Lagos, Nigeria · Phone · Gmail · Portfolio · GitHub · LinkedIn

---

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (Node.js, Express), TypeScript, React.js, Python, Django, PHP, Laravel
Datastores: MongoDB, PostgreSQL, MySQL, Redis
Dev & Infra: Git/GitHub, Vercel, Docker, RESTful APIs, Webhooks, CI/CD basics, AWS
Payments & Integrations: Stripe, Paystack, Flutterwave, external market data APIs
Realtime & Media: WebSockets / Live sessions, streaming provider integrations, video upload & webhook workflows
Testing & Quality: Input validation, structured error handling, Postman / Thunder Client collections, load testing & performance tuning
UI & Styling: Tailwind CSS, Framer Motion, Chart.js (data viz), accessibility (ARIA)
Other: JWT / OTP authentication, role-aware authorization, idempotent transaction handling, ExcelJS, PDFKit

---

PROFESSIONAL EXPERIENCE

Senior Backend Engineer — Hallos (Creators Marketplace & Livestreaming Platform) (Remote)
2024 – Present

- Architected and deployed a multi-currency creators' marketplace enabling **1,000+ educators** to sell live classes and courses, processing **₦50M+** across NGN/USD/GBP/EUR wallets with automated payment routing (Paystack/Stripe).
- Engineered a financially consistent wallet and transaction ledger using PostgreSQL row-level locking and ACID transactions, achieving **zero balance inconsistencies** across 10K+ concurrent operations.
- Implemented multi-layer fraud prevention (2FA withdrawals, velocity checks, risk scoring, idempotency), blocking **98% of fraudulent attempts** and eliminating duplicate charges across payment retries.
- Built scalable live streaming infrastructure (ZegoCloud + Mux) supporting **500+ concurrent participants/session** with <2s latency and automated lifecycle cleanup reducing server overhead **~40%**.
- Optimized high-traffic financial and enrollment queries via indexing and tuning, improving API latency **~800ms → <200ms (75% faster)** while sustaining **10K+ daily active users**.

- Designed subscription and enrollment architecture (single purchase, monthly pass, yearly plans) with automated access control and expiry tracking, reducing manual enrollment operations **~70%**.
- Integrated AWS Bedrock AI pipelines to generate **course transcripts and adaptive quiz questions** from creator content, enabling competitive quiz gameplay (peer-vs-peer, state-level tournaments) and standardized exam prep (WAEC/JAMB).
- Built audit-compliant financial logging and analytics dashboards tracking revenue, enrollments, and creator earnings across **50K+ transactions/events**, enabling real-time platform oversight and reporting.

Senior Software Engineer — AFRIMA: Africa's Global Music Award : Continental Awards Evaluation System (Remote)
2025 – Present

- Led backend development of a continent-scale adjudication platform used by distributed jurors to evaluate **10,000+ artists** across regional and multi-continental award categories, replacing manual spreadsheet-based scoring workflows.
- Architected a multi-stage evaluation pipeline with **admin-gated approvals, duplicate-safe submissions, and full audit logging**, ensuring scoring integrity and traceability across judges and categories.
- Designed scalable MongoDB schemas supporting **multi-continental category evaluations per artist** and extensible scoring frameworks for both music and video adjudication types.
- Engineered complex MongoDB aggregation pipelines computing **category rankings, weighted averages, and percentage scores** across multiple judges and criteria dimensions.
- Optimized heavy aggregation and reporting queries via indexing and pipeline tuning, reducing query latency by **40–60%** and maintaining **≤1s p95 API latency** under concurrent adjudication load.
- Built secure role-based access (Admin/Juror) and evaluation dashboards enabling real-time scoring, review, and oversight across continent-wide submissions.
- Implemented automated results collation and exports (ExcelJS, PDFKit), reducing manual adjudication reporting effort by **~70–80%** for organizers.
- Added validation, duplicate protection, and activity tracking safeguards that eliminated inconsistent scoring states and ensured **data integrity across thousands of evaluations**.

Freelance / Contract Projects (Remote)

- Y**upacgo: AI-Powered Investment Platform** — Developed a scalable fintech platform delivering personalized stock recommendations and virtual portfolio management for retail investors. Architected a RESTful API (54+ endpoints) integrating multiple market data providers (Finnhub, Alpha Vantage, Twelve Data) with intelligent fallback, health monitoring, and Redis caching that improved response times by 80%. Implemented secure JWT authentication with OTP, role-based access control, and rate limiting, alongside real-time notifications and automated price

monitoring via background jobs. Built comprehensive user onboarding/profiling, portfolio analytics, watchlists, and an admin dashboard for user and system oversight.

- **DFX Limited** — Built a multi-service backend powering LMS, E-commerce, and agency leads with Cloud Storage, Paystack payments, admin workflows, and secure file delivery, automated platform increased company workflow by 40%.
- **Gulf of Guinea Midstream Limited** — Corporate React + Tailwind site; optimized layout & typography, reduced CSS bloat by 35–45%. Improved index coverage and SEO.
- **Gulf of Guinea Oil Exploration** — Converted Figma to multi-page React app; image optimization and route-level code-splitting yielded Lighthouse performance 90+ (mobile). Built accessible Chart.js dashboards with INP ≤ 200 ms.
- **Anoh Gas Park** — Figma -> React site with SEO improvements; achieved ~40% increase in organic traffic within two months.
- **FinCalc (Full-Stack)** — Launched finance tracker used by 1,000+ active users; implemented role-based access, OTP reset, and performance optimizations that improved chart interactivity.
- **pinkyshelbybeauty (US-based E-commerce Store)** — Built full e-commerce stack with JWT auth, multi-role access, real-time stock, paystack integration; improved checkout completion by ~20%.
- **SoleComfortShoes (US-based Retail Brand)** — Developed a responsive e-commerce storefront for a U.S. footwear company; implemented secure checkout, optimized product discovery, and performance tuning to support cross-border customers.
- **Lana Renovations (UK-based Construction & Renovation Company)** — Built a professional, SEO-optimized website for a UK renovation firm; delivered responsive layouts, clear service architecture, and performance optimizations to improve lead discovery and client credibility.

EDUCATION

B.Sc. Computer Engineering — *University of Lagos*
Expected Sep 2026 — Lagos, Nigeria

CPISM (Professional Certificate) — *Aptech Career Program*
Sep 2022 – Sep 2024 — Ikeja, Lagos

LANGUAGES & INTERESTS

Languages: English (Fluent), Arabic (Conversational)
Interests: Open-source collaboration, mentorship in tech communities, technical writing and knowledge sharing
